

How to Create a **Crypto Farm** to Earn Daily Passive Income!

By
Chris Ford

Table of Contents

- Step 1 – Download your Metamask wallet;
- Step 2 – Buy Ethereum & send to your wallet;
- Step 3 – Add TitanX custom token to your wallet;
- Step 4 – add Volt, Hyper or whichever pair your choose to farm custom token to your wallet;
- Step 5 – at app.uniswap.org you will swap your Ethereum for TitanX;
- Step 6 – at app.uniswap.org you will now swap ½ your TitanX for VOLT, Hyper or which pair your choose to farm;
- Step 7 – at titanfarms.win you will create your farm;
- Step 8 – add TINC custom token to your wallet.

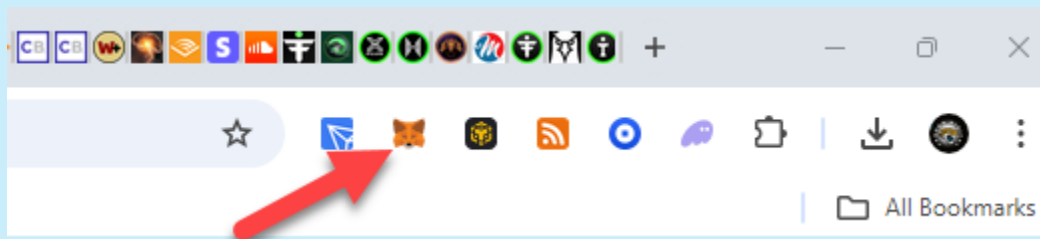

This is a simple **step by step guide** to creating your crypto farm at titanfarms.win.

Step 1 - Download Your Metamask wallet at metamask.io/download; Be sure to store your 'secret phrase' in a safe place. I would hand write several copies of your 'secret phrase' and put in different places for safety.

You can use other wallets if you like such Phantom, Coinbase wallet, etc. For this guide I am using metamask. Metamask is an Ethereum blockchain

wallet and our farm, titanfarms.win, is built on the Ethereum blockchain.

I recommend a chrome browser extension wallet to store on your desktop/laptop. Your browser extension wallet once installed should look like the image below:

Step 2 - Buy ethereum cryptocurrency from an exchange (I use coinbase.com) and send the ethereum to your metamask wallet.

If you do not have an exchange account (kraken, crypto.com, etc.) you will need to **create an account**.

I am in the USA so I use coinbase. Be sure and complete the account setup verifications that they require like drivers license, bank verification, etc.

With coinbase I always use my **bank debit card** to buy crypto because the **transactions are immediate** with a debit card. However, at first you may have to use your bank account and not debit card due to coinbase limitations. Bank account transactions take 3-5 business days before they release your Ethereum.

Step 3 - Add **titanx custom token** to your metamask wallet. [This video](#) demonstrates how to buy titanX and add both **titanX** and **dragonX** custom token to your metamask wallet. The video also demonstrates how

to buy DragonX. DragonX is obtained by swapping TitanX on app.uniswap.org.

The token address can be obtained by visiting **app.titanx.win** or get it here ==>

How to Add *DragonX*
CUSTOM TOKEN to Metamask
(& buy DragonX)

METAMASK

-->DragonX.win
-->app.titanx.win
-->metamask.io/download

Step 4 - you will also need to **add another custom token of your choice (DragonX, Hydra, TINC, Volt, Hyper, WETH)** to your metamask wallet, as all farms are created in pairs.

For example, at titanfarms.win there are currently 7 available farms that pay you daily including the following:

7 Farms Available at titanfarms.win

- 1 – dragonx/hydra;**
- 2 – dragonx/titanx;**
- 3 – tinc/titanx;**
- 4 – volt/titanx;**
- 5 – weth/titanx;**
- 6 – hyper/titanx;**
- 7 – inferno/titanx.**

See image below.

You can see the entire TitanX ecosystem and protocols built on TitanX by visiting titanXhub.com.

7 farms (token pairs)

I am currently farming **Hyper and Volt**. The Hyper contract address can be obtained at app.hydra.win & volt contract address at volt.win.

Step 5 - Swap your ethereum for titanx by visiting app.uniswap.org. Once you arrive at app.uniswap.org you will connect your metmask wallet. **Make sure you leave** some ethereum in metamask wallet for gas fees.

You now have TitanX token in your metamask wallet. You will need this in order to create your farm at titanfarm.win. 6 of the 7 available farms use TitanX as one of the pairs.

Step 6 - while at **app.uniswap.org** you will then **swap 1/2 your titanx** for hyper or volt (or whichever farm you choose - there are currently **7 farms available...more coming soon**).

After this swap you should now have in your wallet:
(always make sure you leave some Ethereum in your wallet for gas fees).

- 1/2 TitanX in your metamask wallet and
- 1/2 of whichever pair you chose to create your farm.
I use Volt & Hyper.

Step 7 – In this step we will begin to Create our farm.
Here is what to do:

- go to titanfarms.win and connect your metamask wallet.
- Choose which farm you wish to earn from and add 1/2 titanx and 1/2 of the other token you have chosen. I am currently farming hyper/titanx & volt/titanx. When you successfully add 1/2 of each token to your farm you should get a 'Farm successful' message from titanfarms.win.

Step 8 - Your rewards will begin immediately after you create your farm. Your rewards are paid in TINC token. Therefore, we need to add **TINC custom token** to your metamask wallet.

You can withdraw the TINC token as often as you wish to your metamask wallet.. Just remember that each time you withdraw you will be charged a small Ethereum fee. (keep some ETH in your wallet at all times).

NOTES:

You can withdraw directly to your wallet the TINC rewards whenever you wish. To cash out you reverse the token swap to ETH on app.uniswap.org, then send to coinbase.com where you sell the crypto and deposit to your debit card. **The online course video will give a DEMO.**

There is a **ONLINE VIDEO COURSE coming soon!**

**CONGRATULATIONS, YOU ARE NOW OFFICIALLY A
CRYPTO FARMER!**
